-- The MAILING DATE of this communication appears on the cover sheet with the correspondenc address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 July 2001.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 67-76 and 78-80 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 67-76 and 78-80 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☒ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☒ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

DETAILED ACTION

Amendment Entry

1. Applicants' Amendment-C in response to the Office Action mailed 17 January 2001 in Paper #11 is acknowledged. Applicants have canceled claim 77 without prejudice or disclaimer. Amended the specification along with claims 67-74. Claims 67-80 were rejected under 35 U.S.C.112, second paragraph. Claims 71-74 were rejected under 35 U.S.C.112, first paragraph. Claims 67-80 were rejected under obviousness-type double patenting over co-pending application no. 09/017,976. Claims 67-80 were rejected under U.S.C. 103(a).
2. Currently, claims 67-76 and 78-80 are pending and under consideration.

OBJECTIONS WITHDRAWN

Priority

3. Applicants have amended the first paragraph of the specification to include International Application No. PCT/US99/02289, filed February 3, 1998, which is a continuation-in-part of U.S. Serial No. 09/017,976, filed February 3, 1998", therein obviating this objection.

Specification

4. The amendment to the specification such that the first page of the specification is numbered as page 1 and the description for figure 7 includes panels A and B have obviated the objections listed as item 8 in paper #11.

Claim Objections

5. Applicants have amended claim 69 in accordance with the Examiner's suggestion. The objection is withdrawn.

OBJECTIONS MAINTAINED

Drawings

6. The drawings in this application have been objected to by the Draftsperson under 37 CFR 1.84 or 1.152 (see PTO-948). Applicant is required to submit a proposed drawing correction in reply to this Office action. However, formal correction of the noted defect can be deferred until the application is allowed by the examiner. Applicants have deferred revised drawing corrections until allowance of the instant application. The objection is maintained.

Information Disclosure Statement

7. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the examiner on form PTO-892 or applicant on form PTO-1449, cited the references they have not been considered. (For example see pages 87 –100). Applicant has not responded to the objection, it is therefore maintained.

Oath/Declaration

8. A new oath or declaration is required. The wording of an oath or declaration cannot be amended. If the wording is not correct or if all of the required affirmations have not been made or if it has not been properly subscribed to, a new oath or declaration is required. The new oath or declaration must properly identify the application of which it is to form a part, preferably by application number and filing date in the body of the oath or declaration. See MPEP §§ 602.01 and 602.02.

Art Unit: 1641

The oath filed 12/01/99 and 2/28/00, list priority document No. 09/017,976 and PCT/US99/02289 with corresponding filing date as 3 February 1999. The correct filling date for Application No. 09/017,976 should be 3 February 1998. Appropriate correction is required.

Applicants will prepare and file a revised declaration and power of attorney, which lists the filing date of U.S. serial No. 09/017,976 as February 3, 1998. Until such time the objection is maintained.

Specification

9. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

10. The use of trademarks has been noted in this application (For example see "Superose" on page 12, line 18). They should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks. Superose has not been capitalized in the disclosure. The objection remains.

REJECTIONS WITHDRAWN

Claim Rejections - 35 USC § 112

11. Claims 67-80 stand withdrawn from rejection under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention for reasons of record on paper number 11.

REJECTIONS MAINTAINED

Claim Rejections - 35 USC § 112, first paragraph

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

12. Claims 71-74 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification lacks complete deposit information for the deposit of hybridoma cell lines and monoclonal antibodies B108, B109, B152, and B207 in accordance with 37 CFR 1.801-1.809. While the specification provides enough information for one ordinary skill in the art to produce hybridoma cell lines and monoclonal antibodies with the same or similar properties of and monoclonal antibodies produced by the same (B108, B109, B152, and B207), reproduction of identical cell lines and antibodies is an extremely unpredictable event.

Art Unit: 1641

Because it does not appear that the monoclonal antibodies and their corresponding hybridoma cell lines, are known and publicly available or can be reproducibly isolated from nature without undue experimentation, a suitable deposit of the hybridoma cell lines and monoclonal antibodies for patent purposes is required.

If the deposits have not been made under the provisions of the Budapest Treaty, then in order to certify that the deposits comply with the criteria set forth in 37 CFR §§ 1.801-1.809, assurances regarding availability and permanency of deposits are required. Such assurance may be in the form of an affidavit or declaration by applicants, assignees or a statement by an attorney of record over his or her signature and registration number stating that the deposit has been accepted by an International Depository Authority under the provisions of the Budapest Treaty, that all restrictions upon public access to the deposit will be irrevocably removed upon the grant of a patent on this application and that the deposit will be replaced if viable samples cannot be dispensed by the depository is required. This requirement is necessary when a deposit is made under the provisions of the Budapest Treaty as the Treaty leaves this specific matter to the discretion of each State.

Amendment of the specification to recite the current practice requiring that a statement concerning all restrictions upon public access to the deposit will be irrevocably removed upon the grant of a patent on this Application and that the deposit will be replaced if viable samples cannot be dispensed by the depository made in the instant Application.

Art Unit: 1641

Without such a statement, it would be impossible for the skilled artisan to practice the invention of claims 71-74 because the specific deposits cannot be placed into the hands of the artisan because other clones made from the source material have no predictable reasonable expectation of success of being identical to the single clone deposited.

Furthermore, unless the deposit was made at or before the time of filing, a declaration filed under 37 C.F.R. 1.132 is necessary to construct a chain of custody. The declaration, executed by a person in a position to know should identify the deposited hybridomas and monoclonal antibodies by its depository accession number, establishes that the deposited hybridomas and monoclonal antibodies are the same as that described in the specification, and establish that the deposited hybridomas and monoclonal antibodies were in applicants' possession at the time of filing.

Applicant's attention is directed to In re Lundak, 773 F.2d.1216, 27 USPQ 90 (CAFC 1985) and 37 CFR §§ 1.801-1.809 for further information concerning deposit practice.

Response to Arguments

Applicant has amended the specification to reflect the ATCC deposit information pursuant to and in satisfaction of the requirements of the Budapest Treaty, However the specification does not recite the current practice requiring that a statement concerning all restrictions upon public access to the deposit will be irrevocably removed upon the grant of a patent on this Application and that the deposit will be replaced if viable samples cannot be dispensed by the depository made in the instant Application. Please add to the specification.

Double Patenting

13. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

14. Claim 67-80 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 53-81 of copending Application No. 09/017,976. Although the conflicting claims are not identical, they are not patentably distinct from each other because The instant claims are not patentably distinct from the claims found in co-pending Application No. 09/017,976 because the claims employ the same method steps that encompass obvious modifications in assay design while utilizing the exact same reagents (i.e. molecular isoforms of hCG, non-nicked hCG, B152, B109, and B108). Although one preamble recites "A method of predicting pregnancy outcome – 09/017,976" and the other preamble recites "A method of detecting gestational trophoblast malignancy – 09/311,428", the preambles are encompass the same subject matter and are not given patentable weight. See MPEP 2111.02 Weight of Preamble

Art Unit: 1641

PREAMBLE IS NONLIMITING UNLESS IT BREATHES LIFE AND MEANING INTO THE CLAIM

The preamble is not given the effect of a limitation unless it breathes life and meaning into the claim. In order to limit the claim, the preamble must be "essential to point out the invention defined by the claim." *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951) (discussed below). In claims directed to articles and apparatus, any phraseology in the preamble that limits the structure of that article or apparatus must be given weight. In *re Stencel*, 828 F.2d 751, 4 USPQ2d 1071 (Fed. Cir. 1987) (discussed below). On the other hand, a preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. In *re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) (process claims, discussed below); *Kropa v. Robie*, 187 F.2d at 152, 88 USPQ at 481 (claims directed to apparatus, products, chemical structure, etc., as discussed below). In *re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976), the claim preamble set forth "A process for preparing foods and drinks sweetened mildly, and protected against discoloration, Streckler's reaction, and moisture absorption." The body of the claim recited two steps directed to the formation of high purity maltose and a third step of adding the maltose to foods and drinks as a sweetener. The court held that the preamble was only directed to the purpose of the process, the steps could stand alone and did not depend on the preamble for completeness.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

15. Claims 67-80 are provisionally rejected under 35 U.S.C. 103(a) as being obvious over copending Application No. 09/017,976 which has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e) if patented. This provisional rejection under 35 U.S.C. 103(a) is based upon a presumption of future patenting of the conflicting application.

This provisional rejection might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the copending application was derived from the inventor of this application and is thus not the invention "by another," or by a showing of a date of invention for the instant application prior to the effective U.S. filing date of the copending application under 37 CFR 1.131.

For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Response to Arguments

Applicants contend that gestational trophoblast malignancy is not an obvious variation to the prediction of pregnancy outcome in co-pending application no. 09/017,976. Further maintaining that the method is specifically directed to gestational trophoblast malignancy in not only the preamble but is specific to gestational trophoblast malignancy detection in step (4) of claims 67-70. This argument was carefully considered but not found persuasive because gestation (is the period of time from the fertilization of the egg until birth) and trophoblast malignancy (tumor of the uterus that grows from early fetal skin cells usually causing removal of the uterus) is encompassed by pregnancy outcome. The recited methods employ the same reagents producing the same products for detection. The mere correlation of the method to an event (gestational trophoblast malignancy) that is encompassed by the broad claim of pregnancy outcome does not render the method unobvious. See *In re Plank et al.* (CCPA 1968) 399 F2d 241, 158 USPQ 328. It has been held that the provision of adjustability, where needed, involves only routine skill in the art. *In re Stevens*, 101 USPQ 284 (CCPA 1954). It has also been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

Claim Rejections - 35 USC § 103

16. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Please Note: In the following rejections, the detection of gestational trophoblast malignancy is seen as intended use for methods detecting and evaluating non-nicked hCG and molecular isoforms of hCG in pregnancy/gestational diagnosis.

I. Claims 67-70, 73, 74, and 75-80 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ellish et al. (Human Reproduction, 1996).

Ellish et al. teach an immunoradiometric assay which has two solid-phase immobilized capture antibodies and one detection antibody to study early pregnancy loss.

Ellish et al. employ B109 to capture the non-nicked hCG molecule and B207 to capture free β subunit and hCG free β core fragment. Ellish et al. utilized B108 as the radioactive labeled detection antibody. (page 4074, column 2) .

Art Unit: 1641

Although this reference does not specifically state that the assay will be repeated in order to determine continued high ratios as required in the repeating step (4) it is well known to those with ordinary skill in the art that sampling at various points with multiple parameters is commonly used for in assay systems. Methods for determining this data can be achieved by procedures known to those of ordinary skill in the art..

It would have been *prima facie* obvious to one of ordinary skill in the art to repeat the sample analyses on samples sets and compare them to each other to evaluate the end results in the method demonstrated by Ellish et al. with a reasonable expectation of success and little additional labor because this information can be easily determined utilizing protocols/data points/etc. that are already being used in their methods, such as range sampling on various days of gestation (i.e. HCG concentrations on day 3, day 2 – see Abstract). The repetition of samples in the method of Ellish et al. would have been an obvious modification to the existing method. One of ordinary skill in the art would utilize various comparative calculations for the resulting data sets to evaluate the particular diagnosis. These calculations are routine optimizations that are almost always determined and used in immunoassay studies. Unless the result obtained in the instant application is a significant and unexpected difference over the prior art, it would have been prima facie obvious for one of ordinary skill in the art to repeat sample analysis on a given sample in the given method to determine the unknown diagnosis as a means of optimizing the assays provided by the art.

II. Claims 67-70, 72, 74, and 75-80 are rejected under 35 U.S.C. 103(a) as being unpatentable over Birken et al. (Endocrinology 1993).

Art Unit: 1641

Birken et al. disclose a two-site immunoradiometric assay to evaluate immunoptency of nicked hCG. Birken et al. further teach a capture antibody that specifically binds non-nicked hCG (intact hCG heterodimer) along with a detecting (tracer) antibody. The capture antibody is B109 and the I125 radiolabeling antibody is B108. (See page 1391, column 1).

Although this reference does not specifically state that the assay will be repeated in order to determine continued high ratios as required in the repeating step (4) it is well known to those with ordinary skill in the art that sampling at various points with multiple parameters is commonly used for in assay systems. Methods for determining this data can be achieved by procedures known to those of ordinary skill in the art..

It would have been prima facie obvious to one of ordinary skill in the art to repeat the sample analyses on samples sets and compare them to each other to evaluate the end result s in the method demonstrated by Birken et al. with a reasonable expectation of success and little additional labor because this information can be easily determined utilizing protocols/data points/etc. that are already being used in the cited method. The repetition of samples in the method of Birken et al. would have been an obvious modification to the existing method. One of ordinary skill in the art would utilize various comparative calculations for the resulting data sets to evaluated the particular diagnosis. These calculations are routine optimizations that are almost always determined and used in immunoassay studies.

Unless the result obtained in the instant application is a significant and unexpected difference over the prior art, it would have been prima facie obvious for one of ordinary skill in the art to repeat sample analysis on a given sample in the given method to determine the unknown diagnosis as a means of optimizing the assays provided by the art.

III. Claims 67-70, 72, 74, and 75-80 are rejected under 35 U.S.C. 103(a) as being unpatentable over by O'Connor et al. (Cancer Research, 1988).

O'Connor et al. disclosed assays to evaluate hCG function. O'Connor et al. specifically teach immobilized capture antibodies via B108 or B109 coated solid phase materials which specifically bind non-nicked hCG. (See page 1362, column 1).

Although this reference does not specifically state that the assay will be repeated in order to determine continued high ratios as required in the repeating step (4) it is well known to those with ordinary skill in the art that sampling at various points with multiple parameters is commonly used for in assay systems. Methods for determining this data can be achieved by procedures known to those of ordinary skill in the art..

It would have been prima facie obvious to one of ordinary skill in the art to repeat the sample analyses on samples sets and compare them to each other to evaluate the end results in the method demonstrated by O'Connor et al. with a reasonable expectation of success and little additional labor because this information can be easily determined utilizing protocols/data points/etc. that are already being used in their methods, such as range sampling to determine Inter- and Intra-assay variation (1362 – Quality Control Evaluation of Immunoassay).

The repetition of samples in the method of O'Connor et al. would have been an obvious modification to the existing method. One of ordinary skill in the art would utilize various comparative calculations for the resulting data sets to evaluated the particular diagnosis. These calculations are routine optimizations that are almost always determined and used in immunoassay studies.

Art Unit: 1641

Unless the result obtained in the instant application is a significant and unexpected difference over the prior art, it would have been prima facie obvious for one of ordinary skill in the art to repeat sample analysis on a given sample in the given method to determine the unknown diagnosis as a means of optimizing the assays provided by the art.

Response to Arguments

Provisional Rejection under 35 U.S.C. 103(a) -Applicants will consider filing a declaration showing that the invention disclosed in the copending 09/0176,976 application is not by another. Therefore the rejections in items 13-16 are maintained.

Applicant argues that the rejections under 35 U.S.C. 103(a) as being unpatentable over Ellish et al. (Human Reproduction, 1996), Birken et al. (Endocrinology 1993), or O'Connor et al. (Cancer Research 1988) do not teach the instant invention because they do not teach the use of a ratio between isoforms of hCG and intact non-nicked isoforms of hCG in method determinations. This argument has been fully considered but not found persuasive because a two-step combination process is unpatentable when each lends properties to the final product known to be produced when the step is practiced alone, in the absence of evidence of coaction between the steps, which produce an unobvious result. *In re Fortess* (CCPA 1966) 369 F2d 1009, 152 USPQ 13. The claims remain rejected for the reasons of record above and in paper #11.

Art Unit: 1641

Allowable Subject Matter

17. Currently claim 71 is free of the prior art of record which neither teach or suggest the instant molecular isoform of hCG or a characteristic epitope thereof defined by the specific binding of monoclonal antibody B152. Claim 71 remains objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

18. For reasons aforementioned, no claims are allowed.

19. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 1641

20. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 1641 Fax number is (703) 308-4242, which is able to receive transmissions 24 hours/day, 7 days/week.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lisa V. Cook whose telephone number is (703) 305-0808. The examiner can normally be reached on Monday-Friday from 8:00 AM - 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le, can be reached on (703) 305-3399.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0196.
